To clarify whether decreased intracellular free Mg²⁺ concentration ([Mg²⁺]_i) of blood platelets is associated with the development of idiopathic chronic hemorrhagic purpura, we measured [Mg²⁺]_i in 11 patients with idiopathic chronic hemorrhagic purpura and 12 age-matched healthy subjects. [Mg²⁺]_i was determined using atomic absorption spectrometry with a molybdenum-ascorbate method. After incubation of platelet-rich plasma at room temperature for 5 min, [Mg²⁺]_i was determined. [Mg²⁺]_i of platelets from patients with idiopathic chronic hemorrhagic purpura was significantly lower than that of healthy subjects. A decrease in [Mg²⁺]_i may be involved in the pathogenesis of this disease.The plane struck the northern edge of the mountain The plane was flying at 8,000ft (2,440m) 82157476af
